

Dual Head Using ACAD

Page rotation problems

- 1) Change origin on system to $\frac{1}{2}$ of what it should be, example for a V-460 change to X=16, Y=0. Press XY button, using the arrows move carriage to X=16", scroll down to Set New Origin and press select. You will be asked to Save New Origin, press select.
- 2) Turn off Dual Head Option in print driver, DH can be found in the print driver under the Engraving Field Tab.
- 3) Turn the DH Option off on the engraver; go to Preferences / Options / Dual Head.
- 4) Set you page in ACAD to the full field size, example for a V-460 32x18.
- 5) Only use $\frac{1}{2}$ of the page, 0 to 16" in ACAD. Do not add anything passed the 16" mark in ACAD; it will not print and may crash.
